DETAILED ACTION

The numbering of claims is not in accordance with 37 CFR 1.126 which requires the original numbering of the claims to be preserved throughout the prosecution. When claims are canceled, the remaining claims must not be renumbered. When new claims are presented, they must be numbered consecutively beginning with the number next following the highest numbered claims previously presented (whether entered or not).

Misnumbered claims 1-34 have been renumbered as claims 23-56. All future correspondences should refer to the new claims. ***Election/Restrictions***

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 23-34, 37-43, and 45-56, drawn to an isolated nucleic acid or a fragment thereof, a construct, plant/plant cell comprising said nucleic acid, and a method of using said nucleic acid.

Group II, claim(s) 35, drawn to a protein.

Group III, claim(s) 36, drawn to an antibody.

Group IV, claim(s) 44, drawn to a use of a nucleic acid for identification of inhibitors.

Applicant is also required to elect one nucleic acid sequence and its encoded protein from SEQ ID NO: 1-10 because there is no disclosed common structural feature between the sequences.

The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Art Unit: 1638

The invention of claim 1 is known in the prior art as evidenced by Applicant's own specification. The specification on page 1, last full paragraph, discloses that animal nuclear base transporter encoding sequences were known in the art before Applicant's invention. Therefore, there is no special technical feature that links the nucleic acid of Group I to the protein of Group II, or the antibody of Group III.

In addition, the special technical feature of Group I is considered to be isolated nucleic acid, a construct, plant/plant cell comprising said nucleic acid, and a method of using (first use) said nucleic acid.

The special technical feature of Group II is considered to be a protein.

The special technical feature of Group III is considered to be an antibody.

The special technical feature of Group III is considered to be the use (second use) of the nucleic acid for identification of inhibitors. Under lack of unity practice, where multiple use of a product is claimed, Applicant is entitled for the unity between the product and first method of using the product.

Therefore, for the reasons discussed above, Groups I-IV lack unity.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
